

Breakthrough[®] Resistant Glass

(toughened) glass to gain entry. Even after installing the best locks on your windows and doors, your home is still vulnerable. One hit to your front, rear, or patio door and the criminal walks in unobstructed. You no longer have to live like a prisoner in your own home with unsightly steel bars

Are you living with the fear of your home or business being broken into and burglarized? Some people have no idea the devastation and the feeling of being violated after somebody, a stranger, a criminal has ransacked your property, stolen your valuables and trespassed into your private and personal world. Unfortunately, we live in a world where crime is growing out of proportion and becoming more and more violent. You must be on your safeguard at all times to protect yourself, your family, and your property.

Glass is the weakest link into your home or business; it takes only one blow with a hammer to ordinary or tempered

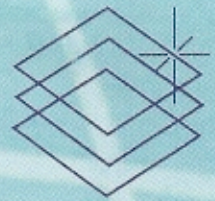

covering your windows. You now can have a Breakthrough[®] Resistant Glass to work for you 24 hours a day, protecting against criminals breaking into your home.

Breakthrough[®] Resistant Glass is two pieces of glass adhered together by a chemically cured, clear strong flexible polymer that holds the glass together on impact. To break into a building protected by Breakthrough[®] Resistant Glass, the intruder would have to make noisy and repeated blows, something criminals do not like to do. After several attempts the burglar would normally leave for easier pickings. There are many benefits enjoyed with Breakthrough[®] Resistant Glass such as:

Burglar resistant
Safety Glass
Blocks 99% of UV Light
Sound Control

24 hour peace of mind
Helps prevent injuries by glass
Stops furnishings from fading
Reduces road traffic noise

Laminate Your Own Breakthrough[®] Resistant Glass

THE WORLD LEADER IN LAMINATED GLASS TECHNOLOGY
Glasslam N.G.I., Inc.

Glasslam, the world leader in laminated glass technology, offers a variety of options to assure you the right system for your operation, as well as a system that will assure increased profit margins.

For a small to medium sized operation, a Glasslam licensed manufacturer has the option of a manual operation. Beginning with the tools provided in a starter kit, resin can be measured, mixed, and hand poured. All start up operations are provided with technical training and support. The hand pour would take place utilizing a manually operated tilt table. Production can be increased as desired simply by adding more jugs. As a manufacturer utilizing this system, increased profits are guaranteed while The financial investment remains low.

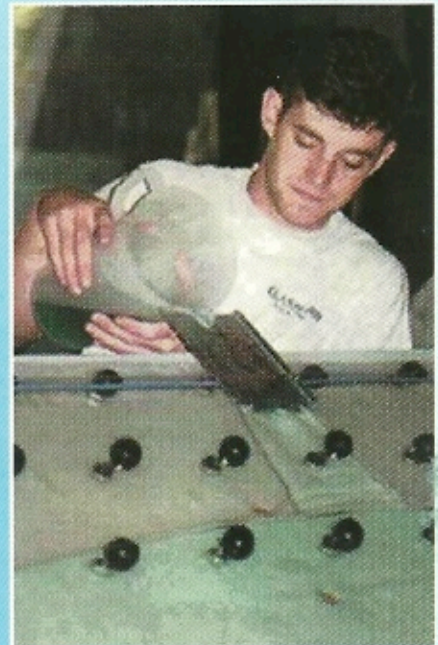

For a larger operation, the manufacturer could add an automated pump to the system. Dispensing resin from a 450 lb drum, this pump allows for accuracy and convenience, as hand mixing and pouring would be eliminated. Financial investment still remains nominal as compared to other systems, yet efficiency and accuracy is dramatically boosted, again leading to increased profits.

The Glasslam manufacturer also has the option of fully automating the production line. In addition to a pump, this line would include a tilt table and an oven.

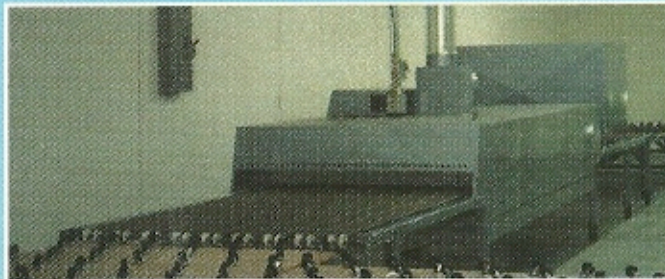

This table, with electric tilting control, allows for even resin distribution as it drives the Breakthrough[®] resistant glass into the oven. The tilt table is built to accommodate any glass thickness, and size up to six by eight feet. This offers the manufacturer assurance in ease of production, as well as efficiency.

The addition of an oven would allow for high speed curing, approximately seven minutes curing time. This high speed curing time enables up to 3,000 square feet of Breakthrough[®] resistant glass to be produced per eight hour shift. Again quality, effectiveness, and efficiency are key benefits of this production line with the end result being increased profits.

Whatever the size of your company or the size of operation you wish to invest in, Glasslam has the system to accommodate your needs.
