

Sand Seal is one of the many options of decorative safety laminated glass offered by Glasslam N.G.I., Inc. This unique product combines the safety benefits of laminate glass with the eye pleasing appeal of sand blasted glass, making it ideal for safety barriers, balustrades, partitions, door panes, side lights, and much more.

HELSINKI PLATFORM, HELSINKI AIRPORT, FINLAND

Glasslam's sand seal is a special coating which is applied to sand blasted glass. After the coating has cured, the sand blasted design can then be laminated to the inside of the glass. This eliminates the problems associated with cleaning sand blasted glass by encasing the design within the laminate.

Sand-Seal can also be produced in any desired color. Sand-Seal comes in translucent white as standard and a range of colors are available to give the effect of stained glass. A three dimensional effect can also be produced by sand blasting both pieces of the glass to be laminated. With the range of colors and the designer's talent, the design capabilities are endless when using the combination of Sand-Seal and the Glasslam laminating system.
