

## New HD Spacer Technology from Glasslam

After 20+ years silicone spacers have finally gone 3D with HD technology from Glasslam

### *What's This D Stuff?*

The 3 big sins of foam spacers have always been the 3 D's.

1. Less **Desiccant** than a four-side-filled traditional spacer
2. Widely varying **Durometer** hardness reeking havoc on automated equipment
3. Industry worst, airspace width **Dimension** tolerances

### *So What Did Glasslam Do About the D's?*

**Desiccant, Durometer, and Dimension** are all 3 brought under control and optimized with Air-Tight™ S & Air-Tight™ T!

- **High Desiccant** - for TRUE four-side-fill durability and environmental sustainability!
- **High Durometer** - above Shore A 70 hardness for cleaner corner notching and consistent application on automated lines!
- **High Dimensional stability** of airspace width, with laser accurate sizing and super low tolerances for problem free glazing, including triples.
